PROFESSIONAL SUMMARY

Full-stack developer with 6+ years of experience specialising in production AI systems, Laravel backends, and cloud-native architecture on AWS. Sole architect and owner of a cross-platform AI microservice handling 7M+ property listings across 111 countries for IQI Global and Juwai.asia. Proven track record of shipping independently — from custom RAG pipelines built without managed AI infrastructure, to geospatial routing engines and a commercial SaaS product in active beta. Deep enterprise platform expertise across Joget-based national-level systems, delivered in partnership with Silverlake Innovation Partners and Infosys. Available for senior remote roles. Multilingual: English, Mandarin, Malay, Cantonese.

TECHNICAL SKILLS

Languages: PHP (Laravel), Python, JavaScript (ES6+), Java, HTML/CSS, SQL

Frameworks & Libraries: React, Next.js, Flutter, SvelteKit, Tailwind CSS, Leaflet.js, Laravel Filament, Joget

Databases & Infrastructure: MySQL, PostgreSQL, MariaDB, Supabase, AWS (EC2, S3, Lambda), Linux (Ubuntu/CentOS), Git, RESTful APIs

AI & Specialised: RAG architecture, vector similarity (hand-rolled, no Pinecone/LangChain), LLM integration (Claude API, ElevenLabs), geospatial routing (Valhalla, self-hosted), XML data pipelines

PROFESSIONAL EXPERIENCE

Full-Stack Developer | IQI Holdings Sdn Bhd *Dec 2025 – Present*

Sole owner of property-ai — a cross-platform AI microservice serving 7M+ property listings across 111 countries on iqiglobal.com and juwai.asia.

- Architected and own property-ai end-to-end: semantic property search, lead-capture RAG chatbot, geospatial routing, and multi-domain API integrations — deployed across 2 production domains and multiple repositories.
- Built a geospatial isochrone engine on self-hosted Valhalla (AWS t3.small) enabling commute-time-based property filtering — a first-of-kind search capability for the platform.
- Engineered a custom RAG chatbot using hand-rolled vector similarity in PHP — no vector database, no managed AI infrastructure — achieving semantic search within existing cost constraints.
- Spearheaded convergence of four legacy domains (juwai.com, juwai.asia, list.juwai.com, m.juwai.com) into a unified architecture, improving SEO and cross-platform data consistency.
- Built a Python XML onboarding engine for bulk property listings, reducing manual processing time by over 90% for global agency partners.
- Developed an AI podcast generator (Claude API + ElevenLabs) converting property briefing PDFs into two-host audio episodes; deployed and ready for company-wide rollout (~7 episodes/month anticipated).
- Implemented a dual-provider map strategy (OSM/Esri) with IP-based switching for optimised global rendering performance.
- Maintained code quality through rigorous PR reviews, automated testing and debugging, and scalable database schema design in an Agile workflow.
- Designed and deployed a multi-module auction and tender listing feature for iqiglobal.com (Laravel + Tailwind CSS).

Full-Stack Developer & Founder | Sanctuary – AI Journaling App (Indie SaaS) *Apr 2026 – Present*

AI-powered journaling app built and shipped to closed beta alongside full-time employment.

- Took product from concept to 17 active beta users in under 2 months via cross-platform mobile development: Flutter (iOS/Android), Supabase (PostgreSQL + auth), Claude API (Haiku/Sonnet), AdMob, and a Next.js/TypeScript marketing site — all built solo on a ~USD 70/month infrastructure budget.
- Dark-mode-first design system, AI journaling companion, tiered pricing (USD 7.99/mo, USD 49.99/yr); full legal compliance (Malaysian PDPA, GDPR) and RevenueCat billing integration in progress.

Freelance Full-Stack Developer | **Independent**Sep 2021 – Present

36+ projects delivered across 6+ years; clients included Maxis, Digi, and TM One.

- Architected and deployed real-time streaming platforms for Maxis, Digi, and TM One using Laravel, PostgreSQL, MariaDB, and GitLab on Linux, including custom analytics dashboards, CI/CD pipelines, and DevOps practices supporting 200+ concurrent viewers.
- Delivered national-level HR management and permit & licensing platforms using Joget, Java, and MySQL.
- Managed full project lifecycles independently: scoping, contracts, delivery, and client relationships.

Associate Software Developer | **Mokxa Technologies LLC (US)**May 2024 – Jun 2025

Remote role; collaborated with Silverlake Innovation Partners and Infosys on enterprise-scale platforms.

- Led development of the HRDC National Competency Standard platform (Java + Joget) in partnership with Silverlake Innovation Partners and Infosys, owning Event and Course Management modules.
- Built a permit and licensing management system for deployment across US and Canadian jurisdictions, handling complex multi-region regulatory workflows.
- Redesigned employee portal UI/UX, achieving an 80% reduction in maintenance time through optimised CMS workflows and automated content updates.
- Designed and developed an asset management product UI/UX aligned to client online branding requirements.

Product Specialist | **Joget, Inc.**Oct 2022 – Apr 2024

Part-time contractor role during final year of degree; contributed to official product content published on Joget's company channels.

- Produced tutorial video content for Joget's official YouTube channel using Camtasia, covering the Joget DX platform — accumulating 60,000+ views as primary onboarding material for the global Joget user base.
- Authored product documentation for the Joget knowledge base, improving developer and end-user onboarding experience.
- Developed and debugged Joget plugins in Java; built internal business applications on the Joget platform.

Junior Full-Stack Developer | **Cake Experiential Communications**Jul 2020 – Feb 2021

- Developed real-time streaming platforms for Maxis, Digi, and TM One using Laravel, PostgreSQL, MariaDB, and GitLab on Linux.
- Supported disaster recovery (DR) implementation for Affin Bank, covering web application failover and database mirroring across environments.
- Built a lucky draw platform with guaranteed-unique name selection logic (Laravel, PostgreSQL).
